

Genasys Protect & Tablet Command

Enhance Interagency Awareness & Communication During Wildfires

Designed to improve incident management and emergency scene accountability, Tablet Command also serves as a complete Mobile Data Terminal (MDT) device inside a fire engine to locate other units and access key information. With Genasys Protect EVAC and Tablet Command, fire rescue teams gain an accurate, complete picture of fire incidents as they unfold and respond effectively.

Benefits

» Configurable Mapping

Show real-time evacuation zone data such as the status of zones, emergency vehicle locations, the location of resources in the area, cross streets, and more.

» Real-time Insights

Increase situational awareness from a trusted source on live location-based data. Share critical information with mutual aid resources from initial attack and beyond.

» Accelerated collaboration

Coordinate with other jurisdictions through a single source of authoritative information, to improve collaboration and save time when the speed and accuracy of your communications matters most.

» Proactive knowledge-sharing

Gather intel about ongoing evacuations before arrival. Know about advisory warnings and evacuations as they happen when time is of the essence.

"For commanding officers ordering an evacuation, it closes the loop with the field units whether or not the warnings have gone out. This reduces radio traffic in rapidly expanding complex incidents. As a branch director, I have used Genasys Protect evacuation zones outside of Marin County. It sped up the process of having access to the zones. I was able to communicate more efficiently and effectively about the areas that needed to be evacuated. This is a game changer in communicating evacuation areas." – **Matt Barnes, Deputy Fire Chief, Southern Marin Fire Protection District**

About Genasys Protect

Genasys Protect helps first responders and emergency managers deliver accurate, actionable communication to the people who need it. Genasys Protect allows first responders and emergency managers to react quickly to unexpected events and emergencies with razor-sharp precision using flexible zones, predictive simulation, emergency warning and mass notification solutions for public safety, and critical event management for commercial enterprises and government agencies.

Community members can stay informed receive real-time alerts and notifications through multiple channels, including through the Genasys Protect website or mobile app. Genasys' solutions go beyond stand-alone mass notification or critical event management by creating an extensive suite of communication, preparedness, and analytics solutions to keep people, communities, and assets protected against the impacts of natural disasters, terrorism, civil unrest, and other dangerous situations.

About Tablet Command

Tablet Command provides the industry-leading Mobile CAD, emergency incident response and management solution to nearly 30,000 users and 700 public safety agencies across the United States and Canada. Tablet Command software solutions enhance safety and operational efficiency for emergency responders on the ground by providing comprehensive, real-time information under a single pane of glass. Tablet Command also records operational performance data as a byproduct of the incident management process. This data, and the insight it can provide, have never before existed in the public safety sector. Learn more about Tablet Command at www.tabletcommand.com.
