5 - Point Checklist for Communication During a Crisis

An Interoperability Resource Guide for Public Safety and Community Leaders

Don't wait until after a crisis to address flaws when managing chaos.

Communications during an emergency event is often a struggle and without a reliable and streamlined process, we're putting lives at risk. With our current models, public safety professionals and their leaders lack the right tools for the job.

Traditional Response

Whether a natural disaster, mass shooting, or high-profile incident, as many as 10 to 15 different agencies may respond. This creates a lot of opportunities for communication breakdowns.

- © City police, county sheriffs, state police, federal law enforcement, district attorneys, state attorneys, local elected officials and state wide elected officials are often at the scene in less than an hour
- Sometimes, other state-wide officials and even federal elected officials are on the scene in as less as 24 hours

Over the years, we've never had an effective way to manage the complexities of inter-agency coordination and a facilitated common operating picture. While first responders might be able to act swiftly, progress can be slowed due to a lack of cohesive communications from decision-makers...until now.

We understand the challenges because we've been there ourselves.

When developing CONNECT, we gathered input from public safety professionals nationwide.

Often repeated was the frustration of finding a solid solution for the complexities and breakdowns of regional communications during an emergency event. Even with all the training, preparation, and planning, public safety leaders continue to struggle with implementing an all-in-one solution.

Ongoing Issues

We need a way to connect every employee and work unit, across all agencies, at a moment's notice. Responding to natural disasters, widespread violence, and other crisis scenarios requires interoperability. Unfortunately, the current means of communications are incredibly dis-joined:

- No Instant agency alerts or updates
- No true interoperability functions
- No centralized communication channels
- ✓ No secure intelligence sharing
- No automatic records retention

Interagency communications and multi-agency decision-making continues to be highly complex. As an example, with any large event, there might be over 400 or 500 personnel responding from multiple agencies and there is often no one person in charge to set expectations and provide instructions.

While everyone involved wants a swift resolution, without strong, timely communications true interoperability may be unattainable.

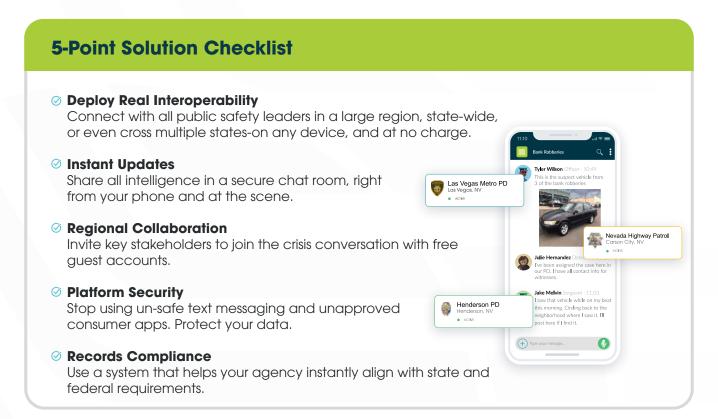

CONNECT supports true interoperability through secure and compliant smartphone messaging

Meet CONNECT—Your Interoperability and Crisis Communications Solution

We bring the experience of being deeply immersed in every aspect of crime scene management, evidence gathering, and law enforcement investigation—we understand the challenges brought on by inadequate communication platforms. CONNECT was developed as a solution that finally makes sense, both during a crisis and in supporting your daily activities

CONNECT offers a comprehensive solution for your crisis management team to stay informed. Most agencies deploy CONNECT immediately after discovering the benefits.

CONNECT brings effective, compliant messaging for all first responders

Contact us today and be ready for ANY crisis, disaster, or emergency incident. Rest assured, Genasys provides ongoing staff training and assistance throughout the implementation
